

Cybersecurity is not an IT problem.
It is a business risk.

We help organizations maintain a **secure and reliable IT environment every day**. By combining Microsoft 365, user support, and cybersecurity into a single service model, we ensure your business operates faster, more efficiently, and without unnecessary downtime.

Kind regards,
Damian Wróblewski
MVP Microsoft 365, Ethical Hacker

Managed Services

Concierge Microsoft 365

Day-to-day Microsoft 365 user and administrator support. We resolve issues, configure your environment, and help your team work securely with Microsoft 365.

SM SOC Security Operations Center

Continuous monitoring and proactive analysis of Microsoft 365 security logs. We detect suspicious activity and threats that standard security tools may miss.

Comprehensive IT Support

Ongoing IT support for small and medium-sized businesses. Helpdesk, Microsoft 365 administration, cybersecurity, and complete IT responsibility managed by our team.

Specialized Services

Audyt IT Microsoft 365

Comprehensive assessment of Microsoft 365 configuration, security, and environment usage. Detailed report identifying security gaps, risks, and prioritized recommendations.

Deployment Microsoft 365

Designing and implementing Microsoft 365 tailored to your organization. Configuration, security, and a structured workplace environment built on best practices.

Migration Microsoft 365

Migration of email, users, and business data to Microsoft 365. No data loss, minimal downtime, and complete control throughout the migration process.

Cybersecurity Services

Negotiation Cyberattack

Professional support during ransomware attacks and other critical security incidents. Threat assessment, damage reduction, and assistance in regaining control of your environment.

IT Advisory for Executive Management

Strategic support for business decisions related to IT and cybersecurity. Risks, priorities, and recommendations presented in clear business language.

Training Cybersecurity

Practical cybersecurity awareness training for employees and management teams. Phishing, MFA, passwords, and real-world cyberattack scenarios.

MANAGED SERVICES

Concierge Microsoft 365

A service for organizations that want **experienced IT experts on demand**. We respond to day-to-day issues, support your users, and keep Microsoft 365 and your IT environment running smoothly.

User Support

Resolving everyday Microsoft 365 user issues, including account access, permissions, data sharing, and problems that interrupt your team's work.

IT Issue Resolution

Handling operational Microsoft 365 requests, including changes, configuration, environment maintenance, and rapid response to support tickets.

Administrative Support

Supporting Microsoft 365 administrators with platform configuration, management, and best-practice recommendations.

One Team. One Responsibility.

Instead of coordinating multiple vendors and ad hoc solutions, you have a single team that understands your environment and takes ownership of everything related to Microsoft 365.

IT That Never Slows Your Business Down

Microsoft 365 Concierge ensures technical issues never interrupt your team's productivity or distract your business from its strategic goals.

SM SOC

System Operation Center

A service for organizations that want to strengthen the security of their Microsoft 365 environment. We proactively **analyze security logs**, detect anomalies and suspicious activity, and support incident response.

Proactive Threat Detection

We continuously monitor your Microsoft 365 environment. We detect unusual sign-ins, attempted attacks, and suspicious activity before they become security incidents.

Log & Alert Analysis

We analyze Microsoft 365 security events and alerts. We separate false positives from real threats and prioritize the actions that matter most.

Recommendations & Remediation

We never leave you with an alert alone. We provide clear recommendations and support security configuration changes and incident response activities.

A SOC Built for Microsoft 365

We focus exclusively on Microsoft 365 security events and log analysis, allowing us to identify real risks faster within your environment.

Security Monitoring That Delivers Business Value

Continuous monitoring and expert threat analysis for Microsoft 365 - without the cost and complexity of building your own Security Operations Center that often provides little practical value.

Comprehensive IT Support

A service for organizations that need reliable and secure IT without expanding their internal team. **We take full responsibility for your day-to-day IT operations,** Microsoft 365, and the security of your environment.

Outsourced IT Department

Complete IT support delivered as a managed service. A single point of contact with clearly defined ownership and responsibility.

Microsoft 365 & Workplace Environment

Administration, configuration, and ongoing management of Microsoft 365. Well-organized accounts, permissions, business data, and a stable workplace environment.

Security & Business Continuity

We never leave you with an alert alone. We provide practical recommendations while supporting security configuration and incident response activities.

Enterprise IT Without Hiring Additional Staff

Gain access to an experienced IT team without recruitment costs or staffing challenges. Predictable monthly costs and clear accountability.

More Time to Grow Your Business

Stop spending time on technical issues and day-to-day IT problems. We manage your IT and Microsoft 365 environment, so you can stay focused on growing your business.

SPECIALIZED SERVICES

Audit Microsoft 365

A service for organizations that require a **comprehensive assessment** of their Microsoft 365 security and configuration. We identify security gaps, risks, and areas for improvement, delivering a report with prioritized findings and actionable recommendations.

Security & Configuration Assessment

We review the key Microsoft 365 security settings. We identify security gaps, configuration issues, and risks related to user access and permissions.

Permissions & Access Management

We verify user accounts, roles, and access permissions across your organization. We identify excessive privileges, unmanaged access, and potential account takeover risks.

Detailed Report & Actionable Recommendations

You receive a clear report together with prioritized actions. Our recommendations are practical, helping improve security while bringing order to your Microsoft 365 environment.

What Do You Gain from the Assessment?

A complete picture of your Microsoft 365 security together with a clear action plan, showing what should be improved and in what order. No guesswork and no wasted budget on unnecessary changes.

The Assessment as the Starting Point for Change

The assessment helps you plan security improvements based on the actual state of your environment. It is the fastest way to organize your Microsoft 365 environment and strengthen your overall security.

Microsoft 365 Deployment

We deploy Microsoft 365 in a structured, secure, and business-focused way. We design the configuration, permissions, and operating standards so the platform effectively supports your team's daily work.

Environment Design & Configuration

We design and configure Microsoft 365 to match your organization's structure. We establish clear policies for access, data management, and user administration.

Security & Access Control

We implement Microsoft security best practices, including MFA, access policies, data protection, and configurations aligned with your organization's requirements.

Structured Team Collaboration

We build an efficient collaboration environment using Microsoft 365, including SharePoint, Teams, OneDrive, and standardized file-sharing processes that simply work.

Deployment Without the Chaos

Successful Microsoft 365 deployment requires proper planning and well-defined standards. We implement your environment so it is secure, consistent, and easy to manage from day one.

Greater Productivity & Better Organization

A properly deployed Microsoft 365 environment improves collaboration and access to business data. Your team works more efficiently while IT gains greater visibility and control over the environment.

Microsoft 365 Migration

We migrate your organization to Microsoft 365 in a structured and predictable way. We transfer email, users, and business data **without data loss or disruption to your daily operations.**

Migration Planning & Preparation

We assess your current environment and plan every stage of the migration. This minimizes risks, errors, and downtime before the migration begins.

Data & User Migration

We migrate email, files, and user accounts to Microsoft 365. The migration is carried out in carefully planned stages with full testing and quality control.

Post-Migration Stabilization

We continue supporting your environment after the migration is complete. We verify system performance, user access, and configuration to ensure everything operates correctly.

Migration Without Downtime

Your team continues working while the migration takes place in the background. We maintain business continuity and protect your data throughout every stage of the migration.

Complete Ownership & Accountability

A single trusted partner manages the entire migration process from start to finish. No confusion, no improvisation, and no shifting responsibility between multiple vendors.

CYBERSECURITY SERVICES

Cybercriminal Negotiation

Support for organizations affected by ransomware attacks or cyber extortion. We help you regain control of the situation, minimize business impact, and manage the incident in a structured and secure way.

Situation Assessment & Response Planning

We evaluate the scope of the attack, associated risks, and available response options. We help you understand the technical, business, and legal implications.

Negotiation Management

We manage communication with cybercriminals in a controlled and professional manner. Our goal is to minimize financial losses, business disruption, and the risk of further escalation.

Incident Response Support

We coordinate both technical and decision-making activities throughout the incident. We help your organization navigate the crisis without unnecessary chaos or rushed decisions.

Fact-Based Decisions, Not Emotional Ones

During a cyber crisis, time pressure and uncertainty often lead to poor decisions. We provide objective analysis and expert guidance so every decision is based on facts- not emotions.

Experience from Real-World Incidents

Our approach is built on hands-on experience responding to actual cyberattacks. We understand how these incidents unfold and how to reduce their business impact as quickly as possible.

IT Advisory for Executive Teams

We help executive teams make critical IT and cybersecurity decisions. We translate technology into business risks, costs, and priorities-without unnecessary technical jargon.

Risk & Priority Assessment

We identify the most important IT and cybersecurity risks. We help determine what truly matters from a business perspective.

Executive Decision Support

We support investment, technology, and IT strategy decisions. Our recommendations are based on facts, data, and measurable business impact-not opinions.

IT & Cybersecurity Strategy

We help organizations build a long-term approach to IT. Technology becomes a business enabler-not a source of operational problems.

Confident Executive Decision-Making

Today, IT and cybersecurity are executive-level responsibilities. We help leadership teams make informed decisions with a clear understanding of business risk.

An Independent Expert Perspective

Receive objective guidance from consultants with experience across many organizations. No conflicts of interest, no internal politics-just independent expert advice.

Cybersecurity Awareness Training

Training designed for organizations that want to reduce security incidents caused by human error. We teach practical security habits and procedures that strengthen your organization's cybersecurity every day.

Employee Training

Practical training focused on everyday cyber threats, including phishing, suspicious links, passwords, MFA, and secure handling of business data.

Executive Leadership Training

Cybersecurity from a business and decision-making perspective. Risks, business impact, incident response, and executive responsibilities.

Real-World Scenarios & Examples

No theory and no "death by PowerPoint." We demonstrate real attack techniques and teach employees how to recognize threats in everyday situations.

Fewer Incidents Through Greater Awareness

Most cyber incidents begin with a simple human mistake. Security awareness training reduces risk and strengthens your organization's overall cyber resilience.

Training Tailored to Your Organization

Every training program is customized to your industry, business needs, and real-world threats. Your employees gain practical knowledge they can apply immediately.

END-TO-END LAPTOP MANAGEMENT & SECURITY

End-to-End Laptop Management & Security

Security Masters takes full responsibility for the deployment, configuration, and continuous security management of your leased laptops.
Complete control over your corporate devices.

Device Onboarding

We deploy laptops into your Microsoft 365 environment following Microsoft best practices. Device configuration, security policies, and user-ready provisioning included.

Continuous Management & Monitoring

Devices are managed through Microsoft Intune. We monitor compliance, enforce security policies, and detect unauthorized activities across your environment.

Incident Response

Continuous monitoring and rapid response to security threats. We block suspicious activity, escalate critical incidents, and keep your team informed every step of the way.

Three Service Plans:

Essential Plan

Scheduled environment reviews:
1x month

Recommended Plan

Continuous monitoring and faster issue
detection: **1x week**

Premium Plan

Daily monitoring on business days for the
highest level of visibility, control, and security.

Managing Devices Is About More Than Hardware

Leased laptops without proper management create unnecessary risk. We ensure policy compliance, device health, and continuous oversight of your security posture.

Specialists in Endpoint Management

Managing corporate devices requires specialized expertise. Security Masters acts as a dedicated team focused exclusively on endpoint security, compliance, and centralized device management.

Security Masters

Our Story

Security Masters was founded in response to the growing needs of organizations adopting Microsoft 365 without knowing whether their environments were secure and properly configured. From the very beginning, we have focused on practical solutions that improve day-to-day operations while reducing cybersecurity risks.

Today, Security Masters is a team of IT and cybersecurity experts helping organizations manage, deploy, migrate, and secure Microsoft 365 environments. Our strength lies in combining deep technical expertise with business experience and accountability for results.

Some of Our Clients:

Awards & Recognition:

Business Tigers 2024 – Security Masters was featured in the Pro Progressio Annual Report as one of Poland's fastest-growing companies.

Aulery 2023 – Security Masters was recognized among the Top 15 startups in the "Rookie of the Year" category..

MVP Microsoft 365 – Our founder, Damian Wróblewski, received the prestigious Microsoft Most Valuable Professional (MVP) award for the second time, recognizing his outstanding expertise in Microsoft technologies.

Congratulations!

Damian Wróblewski,

We're pleased to welcome you to another year for the Microsoft Most Valuable Professionals (MVP) program in recognition of your outstanding contributions to the community in the following Technical Area/s:

- Microsoft 365

To activate your program benefits, you must complete your onboarding by accepting the

Who Is Behind Security Masters?

Business leaders don't look for someone good. They look for the best.

Damian Wróblewski has been advising executive teams and IT leaders in Microsoft 365 and cybersecurity for years. He designs security strategies, conducts IT security assessments, and helps organizations build competitive advantage-not just eliminate cyber risks.

As a two-time Microsoft MVP and founder of Security Masters, Damian combines deep technical expertise with a strong business perspective. He supports organizations through every stage of a cyber crisis-from incident response and ransomware negotiations to full recovery.
