

# Find out in just 30 minutes whether your company is a target for cybercriminals

Free Microsoft 365 Security Assessment

## Online Meeting

The meeting is led by Damian Wróblewski, founder of Security Masters and a Microsoft Most Valuable Professional (MVP) in Microsoft 365 - a prestigious award presented only to the **world's leading Microsoft experts**.

Only a handful of professionals in Poland hold this distinction.

Damian has over 20 years of IT experience, is an **ethical hacker**, and previously worked for Microsoft Poland and Microsoft Ireland.

He has already helped more than 200 business owners and IT leaders strengthen the security of their Microsoft 365 environments.

Since 2020, we have **identified 309 active cyberattacks** during these meetings. In every case, the organization was **unaware** that the attack was already in progress.

## Environment Analysis

During the meeting, Damian reviews the key Microsoft 365 security settings, identifies security risks, configuration issues, and areas requiring immediate attention.

### We review, including:

- Security vulnerabilities
- Security policies
- Security controls

## Recommendations

You will receive at least **3 practical recommendations** addressing identified risks, vulnerabilities, or configuration issues. **No obligation**.

# 30 minutes that could protect your company from a cyberattack

Discover the most critical risks in your Microsoft 365 environment

## Why should you do this now?

More than **90% of organizations using Microsoft 365 have incorrect or incomplete security configurations**, increasing the risk of cyberattacks and making compliance with NIS2, DORA, and cybersecurity regulations more difficult.

NIS2 and DORA clearly emphasize the **responsibility of executive management** for proper cybersecurity governance and organizational risk management.

Just 30 minutes is enough to identify the most important risks, vulnerabilities, and configuration issues.

## Benefits for your organization

Gain a clear understanding of your Microsoft 365 security posture.

We identify critical configuration issues and security vulnerabilities.

Learn which security improvements should be implemented first.

## Who should attend the meeting?

The business owner together with the IT administrator who has Global Administrator privileges within the Microsoft 365 environment.

See what Damian, an ethical hacker, can uncover in your organization.
