

Audit Microsoft 365

A comprehensive evaluation of your Microsoft 365 security, configuration, and environment usage.

1 What is a Microsoft 365 Security Assessment?

It is a **comprehensive evaluation of your Microsoft 365 environment**, based on system configuration, security settings, and security log analysis.

It can be compared to a full medical examination. Just as a doctor reviews test results before making a diagnosis, a Microsoft 365 Security Assessment analyzes configuration, security controls, user activity, and administrator behavior. The entire assessment is performed remotely without disrupting your daily operations.

The objective of the assessment is to **present the current security posture of your organization together with prioritized recommendations and a remediation plan.**

2 What does the assessment process look like?

1. Data Collection

Review of Microsoft 365 configuration, security logs, and environment settings.

2. Expert Verification

Comprehensive evaluation performed by the experienced Security Masters team.

3. Expert Analysis

Identification of security risks, vulnerabilities, and development of detailed recommendations.

4. Results Review

Presentation of the final report, findings, and recommendations for your organization.

3 What does the report include?

Comprehensive report containing over 200 pages of detailed Microsoft 365 security analysis.

4 Who is this report intended for?

Executive Management

Key business risks, remediation priorities, and their impact on organizational security.

IT Department

Detailed technical recommendations, remediation steps, and configuration guidance.

The outcome of the assessment is a detailed report containing identified risks, security recommendations, and a remediation roadmap based on real data collected from your Microsoft 365 environment.
